- 6 - Step Flashing
- 7 - Gable Ends
- 8 - Valley Gutters
- 9 - Flat Roof Abutments

WHAT IS IKOFLASH-E

Is IKO's new lead replacement product with the same look and feel of traditional lead. IKOfash-e has no harmful effects on people's health and planet.

A second generation lead replacement that's very easy to use. IKOfash-e is applied in exactly the same way as normal lead and is equivalent to lead code 5.

MORE SUSTAINABLE THAN LEAD

IKOfash-e has the look and feel of traditional lead, but is 31% more sustainable.

CIRCULAR MATERIAL

The raw material is r-PVB, the safety foil in e.g. windshields. The product can be recycled and reused after its lifetime.

LONG ROLL LENGTHS

IKOfash-e can be installed in longer strips, so you can seal larger areas with fewer overlaps and joints, saving you time and materials.

FEW ACCESSORIES NEEDED

IKOfash-e is easy to apply. Use a pair of robust scissors to cut the product to size, a roller and a lead dresser to mould it and fixing clips to fix to masonry joints quickly with a polysulphide mastic sealant to seal.
